REPORT

OF THE

Board of Regents, State University,

TO THE

CONSTITUTIONAL CONVENTION.

1878

1†

UNIVERSITY OF CALIFORNIA, BERKELEY, November 23d, 1878.

To the Honorable President and Members of the Constitutional Convention:

GENTLEMEN: In response to your resolution of date October thirtyfirst, eighteen hundred and seventy-eight, the following statements are herewith respectfully submitted, arranged in the following order:

First—Statement of cash receipts from all sources, from August eighth, eighteen hundred and sixty-eight, to June thirtieth, eighteen hundred and seventy-eight, both inclusive.

Second—Statement of cash disbursements and investments for the same period.

Third-Appendix "A" and "B," giving the proper segregations of cash receipts and disbursements.

Fourth-Statements of accounts with savings banks, and certain donations.

UNIVERSITY OF CALIFORNIA.

Statement of Cash Receipts from August 8th, 1868, to June 30th, 1878, both inclusive. (a.)

JOHN LECONTE, President of the University of California.

Cr.

ROBT. E. C. STEARNS, Secretary of the Board of Regents, University of California.

10

.

[The following statement from the President, Jno. LeConte, and letter of Professor E. W. Hilgard, are, by order of the Constitutional Convention, appended to this report.]

WHAT HAVE THE REGENTS OF THE UNIVERSITY TO SHOW FOR THEIR EXPENDITURE?

1. They have secured a corps of professors and instructors of ability and reputation, and established a *curriculum* of studies which, for its range and variety, bears comparison with the oldest and best endowed institutions in the Eastern States.

2. They have, in the course of nine years, succeeded in establishing an institution of high grade, which already assumes an acknowledged rank among the Universities of our country—in which instruction is imparted in all branches of culture and useful knowledge, free to all residents of California, both male and female. No money consideration can represent the value of such an institution to the State.

3. The amount expended for instruction in its various forms, for free scholarships, and for support (during a short period) of a Preparatory Department, has of course gone beyond recall. For this they have nothing *tangible* to show. It is represented by the knowledge imparted to hundreds of the youth of our State. It will assuredly bear its fruits in time, in the form of wise statesmen and legislators, accomplished scholars, original thinkers and investigators, able jurists, public benefactors, and virtuous citizens. Dollars and cents can not represent the value of these contributions to modern civilization.

4. But, aside from the intangible blessings conferred by the University, the Regents have *properties* of great value to show for the money expended. The State now owns:

(2.) (3.)	Two hundred acres of land at Berkeley, with cost of ornamenting, grading, and improving site—valued at Three first-class buildings at Berkeley, with the furniture of the same A museum, embracing extensive collections of geological, mineralogical, botani- cal, and ethnological specimens; also, works of art, etc.—mostly private dona- tions	\$250,000 397,000 50,000
(4.)	A library, containing over 14,000 volumes-expended by Regents	18,000
	Private donations (estimated value)	17,000
(5.)	Collections of apparatus, physical, chemical, and other aids to instruction	25,000
(6.)	Eight (8) cottages for students	24,000
(7.)	Gymnasium building-recently the gift of Mr. A. K. P. Harmon-	7,000
(3.)	Printing office property	2,500
• /	Printing office property Printing press—gift of Dr. Samuel Merritt	1,500
(9.)	Propagating houses, barn, farm implements, and orchard containing over five	_,
()	hundred varieties; also, many varieties of grapes, etc.	· 4,800
(10.)	Forty-seven acres of land near Oakland—a gift from the late Edward Tomp-	2,000
(-00)	kins—present value	40,000
(11.)	Toland Medical Hall in San Francisco-a gift from Dr. H. H. Toland	75,000
(12.)	Medal Fund—a gift from friends of the University	2,600
	Brayton property—mortgaged notes	68,530
(-0.)	Brayton property—investment in bonds	20,140
(14)		
(14.)	Seminary Land Fund-invested by Regents in six per cent. bonds-cost	19,380

\$1,022,450

JOHN LECONTE,

President of University of California.

Honorable J. R. Freud:

DEAR SIR: Your favor of sixteenth came duly to hand. As it would be difficult, and on account of the state of my eyes almost impossible, for me to make out, at short notice, as full a statement as would be desirable in respect to the matters you allude to, I mail to you with this such printed matter as I have published, bearing on the questions in hand. My Walnut Creek lecture, and the first fifteen pages of my report to the President, contain the gist of the whole matter, so far as my views on the past, present, and future of the Agricultural Department are concerned; and I have only to add that, with the aid of the appropriation made by the last Legislature, these views are now being carried out as rapidly as possible, in accordance with a printed, but not as yet published, programme, of which, unfortunately, I have no copy to send you, but which is in the hands of both Mr. Martin and Mr. Winans. This programme includes:

1. Courses of lectures on "special cultures," in accordance with the circular herewith inclosed. This is given regularly by Mr. C. H. Dwinelle, and by other lecturers specially competent in particular subjects, as these can be obtained. Among the latter, a clinical lecture on "glanders" was, last week, delivered by Dr. A. De Tavel, of San Francisco, to a large audience. Mr. Dwinelle's lectures are regularly attended by four students, and almost always by from two to six persons not regular students in the agricultural course, of which this is the "senior" year.

2. A garden of economic botany. This is now being laid out and occupied, on the level tract next the entrance from the railroad depot. It will embrace, as fully as possible, all the economically useful plants capable of outdoor culture in this climate. At the same time, culture experiments on a larger scale are being carried out on the grounds north of the branch of Strawberry Creek; and, for the culture of plants requiring heat, an addition is being made to the propagating houses already occupied. A large number of seeds of important forest trees have lately been put into the ground, to be later transplanted to suitable positions in the University domain, which will ultimately (if my plans are carried out) be to the agricultural student what the cabinet of minerals and laboratory are to the mining student.

3. Increased and improved means of demonstration in instruction in the several practical courses, in the way of collections, illustrations, implements, etc.

4. The continuation, to the extent rendered possible by our means, of the work of an agricultural survey, as explained in my report to the President, page eleven and following ones, and exemplified in the Appendix, pages twenty to sixty-three. A number of important matters have been under examination since the date of this report, and will be published before long. At the moment, the work has received a check in the resignation of my assistant, who can be replaced only by training up another graduate in his stead. For this purpose, I have selected Mr. F. W. Morse, of the class of eighteen hundred and seventy-eight.

I consider the prosecution of this work as the key to the situation, as it is the most direct means of proving to farmers how great are the benefits to be derived by their sons from the study of the scientific principles underlying agriculture. I cannot but ascribe largely to the published and unpublished results of this work, the gratifying increase of students in the strictly agricultural course, and the increased attendance of others upon the lectures of the department, so far from the "single student" of current report (which doubtless originated in the statement that there was but one student in the senior class this session), the facts now are as follows:

Regularly attending senior course of special cultures Regularly attending junior course of agricultural chemistry Electing the course of economic botany, second term, sophomore	$\begin{array}{c} 4\\ 6\\ 12 \end{array}$
Total in agricultural course proper, by January 1st, 1879 Deduct as twice mentioned	
Total attending regularly	18

It should be remembered that, moreover, the entire scientific division of the sophomore class (from forty-five to fifty students) attend regularly the first term of my course, to wit, general botany, which begins the agricultural course. After the first term they elect their college, as above stated.

When you remember that years ago not a single student elected the agricultural course at this time of the year, the change that has occurred cannot but be gratifying. The course has become accepta-ble and respectable, in the eyes of the students and their parents, in proportion to its increased thoroughness and educational value. And I have no fears as regards its future increase of patronage and usefulness, if the policy that has effected this change is continued. Let me add, that I consider the number of students now in attendance here, on this course, as a fair index of the interest now taken by the farming population in the professional education of their sons as farmers. If the means and appliances for such education here are not, at this time, all that could be desired, whatever is offered is indispensable, and what is lacking can in a great degree be made up by practice on any well-conducted farm. For mere drill in farm operations no sensible man will send his son to college; and business management of a farm will never be learned under the artificial conditions of a College Farm. I am unable to see why, of all professional schools, the Agricultural College should be saddled with the task of converting young men to farming, by keeping them surrounded with what some are pleased to term an "agricultural atmosphere." It is the unintelligent drudgery of ordinary farm life that our boys run away from; and it is only by rendering them intelligent laborers, and not by rubbing in the drudgery, that their aversion to farm life (for which certainly the colleges are not responsible) can be overcome. Whenever farming comes to be a learned profession amongst us, and to be considered as such, young men will not need to be surrounded by a dense "agricultural atmosphere" in order to keep them to their profession. And then, the many farmers who now send their sons to all but the agricultural course at the University, will cease to tell their sons that they "can teach them all the farming they need at home." I am hopeful that this day is coming sooner in California than elsewhere, for natural reasons; but its coming will not be hastened by removing our future farmers from

contact with the rest of the rising and cultured youth of the State; and if Mr. Morrill's own statement is to be believed, that was assuredly not the object of the "Morrill grant."

In conclusion, allow me to suggest, that the first thing needful for rendering the aid of science accessible to the rural population is, that the rudiments at least of natural science should be effectually, and not only nominally, taught in the common schools. The reason why this is not now done is simply that there are too few teachers competent to give such instruction, and if the University does no more than supply these teachers it will have done the greatest possible service to the cause of agriculture. Then, indeed, "farm schools" scattered over the country could do real service, because they would have suitable material to work upon. But so long as there are no teachers, no law or constitutional provision can create efficient schools.

If there is any farther information that I can furnish you, please let me know, and I will do so as rapidly as possible.

Very respectfully yours,

EUG. W. HILGARD.
